

### **STEP 1 Property Damage Assessment**

TDR Roofing performs a thorough inspection of your property to identify and document claimable storm damage to your roof and other exterior components including siding, gutters, windows, and doors.

### **STEP 2 File Your Insurance Claim**

The homeowner files a claim with their insurance company. An insurance adjuster will schedule an inspection, and TDR meets with the adjuster to help ensure all damage is properly documented.

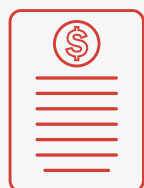

### **STEP 3 Claim Review & Approval**

TDR Roofing provides estimates and documentation in the insurance company's preferred format. Once approved, the insurance company issues the first payment (ACV), which typically serves as the deposit for your project.

### **STEP 4 Project Installation**

Permits are secured when required, materials are ordered, and installation begins. Our team completes the work while documenting any additional repairs or supplements discovered during the process.

### **STEP 5 Supplements & Final Payment**

Any supplements are submitted for approval and final invoices are provided to the insurance company. Once approved, the insurer releases the final payment (RCV), completing the repair process.

## **Questions About Insurance Claims?**

Our team has extensive experience working with homeowners and insurance companies to ensure damage is properly documented and repairs are completed correctly.
